Self-Critique:

When building a website with HTML and CSS, my approach focused on creating a well-structured and visually appealing design. I started by planning the layout, ensuring that the HTML is ordered and accessible. I used CSS for styling, making sure that the fonts and colors of the website are appealing to look at. I made sure to incorporate the screenshots that were given with a seamless finish.

If I had more time, I would try to incorporate the icons that were given to me by the project. I'm not as well-versed in how to add them to the text, so I would take time to learn how to do it. I was also trying to add links to different sections of a page as indicated by one of my peers, but it wasn't working as I wanted it to, so I would also use more time to make that change.
